Enterprise Account Common Questions FAQ

This fictional FAQ is for demonstration only. It contains no real company, employee, domain, or support contact information.

How do I reset a forgotten password?

Open the fictional Northwind Demo identity portal and choose Reset password. Complete the training verification prompt, then create a unique practice password.

Why is my account temporarily locked?

Five unsuccessful demonstration sign-in attempts trigger a fifteen-minute lock. Wait for the timer to finish before retrying so the training counter is not extended.

What should I do when verification prompts do not arrive?

Confirm that the fictional authentication app shows the Northwind Demo profile. Check the device clock and network connection, then request one new prompt.

Account Access Escalation

When should I contact the local IT queue?

Escalate when the demo identity portal reports that verification methods are unavailable, or when access remains blocked after the documented waiting period.

What information is safe to include?

Provide the fictional employee alias, approximate failure time, device type, and the displayed training error code. Never include a password or verification code.

Demo escalation reference: ACCOUNT-TRAINING. This value is fictional and cannot contact a real support team.
